

Release Notes

Scribe Insight

Version: 7.6.1
Release Date: May 15, 2013

This release of Scribe Insight includes the following version updates:

- Scribe Insight Version 7.6.1
- Scribe Adapter for GP Version 4.3.1
- Scribe Adapter for Web Services Version 1.5.1

Requirements

Supported Operating Systems

- ▶ Windows 2008 Server Enterprise and Standard Editions R2 (x64)
- ▶ Windows 2008 Server Enterprise and Standard Editions (x32 & x64) with Service Pack 2
- ▶ Windows 7 Enterprise Edition (x32 & x64)

Microsoft Windows components

- ▶ Microsoft .NET Framework 4 or later
- ▶ IIS 7 with IIS 6 Management Compatibility Mode may be required, depending on the Scribe server Operating System version and installed components
- ▶ Microsoft Message Queuing Service (MSMQ)

Database

- ▶ Microsoft SQL Server 2012: Enterprise, Standard, and Express
- ▶ Microsoft SQL Server 2008 R2: Enterprise and Standard
- ▶ Microsoft SQL Server 2008: Enterprise and Standard

For Scribe products, the SCRIBEINTERNAL database is supported only on Latin_General collation orders (either case-sensitive or non-case-sensitive).

Scribe no longer supports the following Microsoft components:

- Windows Server 2003 (any edition)
- SQL Server 2005
- Windows XP

You need your Scribe Serial Number as part of the registration process. You can find your Serial Number in the original sign-up email sent by Scribe Software. If you are upgrading, your Serial Number can be found by selecting "About Scribe Insight" from the Scribe Workbench Help menu.

Contact your Scribe Sales representative if you have questions:

sales@scribesoft.com.

You may be required to restart the computer as part of the installation process. Please plan accordingly.

If you install or upgrade Insight with any edition of Microsoft SQL Server 2012, you must edit the properties of the Scribe services to log on as a principal with proper rights, as described in the *Scribe Insight Installation Guide*.

DTS files that are upgraded to Scribe Insight 7.6.1 are not backwards compatible with previous versions of Scribe.

As with any upgrade, be sure to back up any DTS files and the SCRIBEINTERNAL database before upgrading the system.

In this version of Scribe Insight, when an older DTS file is opened, you are prompted to save a backup of the DTS file before it is upgraded, and the backup is saved.

If upgrading from Scribe Insight version 6.4.0 or earlier, please manually uninstall Scribe Insight and related adapters before applying Scribe Insight version 7.6.1.

If you are upgrading from Scribe Insight 6.5.0 or 6.5.1, and are using the `GetRowError()` function ([OpenMind Idea #57](#)) as part of your "Update Source" logic, you need to modify the "Update Source" setting after upgrading. "Update Source" will default to update only on success; you need to manually change it to update on success or failure.

What's New in Version 7.6.1

This section summarizes the new features and changes for Scribe Insight 7.6.1. For more information about new features, see the *Scribe Insight Online Help*.

▶ **SSL Support for outgoing email**

Scribe Insight now provides SSL (Secure Socket Layer) support for outgoing email. SSL has been added to the following components:

- **Scribe Console** – A new **Use SSL** checkbox has been added in the SMTP configuration section, located under the Email Settings tab, in the Site Settings window.
- **XML adapter for Target** – A new **Use SSL** checkbox has been added to the SMTP settings window.

Note: Microsoft Office 365 is not supported by the Scribe Insight Email Bridge.

▶ **Ability to set encoding on ANSI files (Default Encoding)**

Default encoding sets the encoding type of the text file. This setting affects how ANSI files are read-from or written-to. For example, an ANSI file with French characters could be set to MS Windows Western European in order to have the characters display properly.

▶ **Allow Destination Override to MSMQ (Microsoft Message Queuing)**

A new feature, **Allow Destination Override**, enables you to dynamically set the destination queue. You can now designate an alternate (override) queue name in the MSMQ Output Options for the target MSMQ connection. This feature adds a field to the target that is used for setting the destination queue.

Note: If the destination queue value is hardcoded, the string must be contained in double-quotation marks ("").

▶ **Insight User Licensing changes**

The licensed number of Scribe Insight users must be greater-than or equal-to the number of users licensed through applications (such as Dynamics CRM, Salesforce, Dynamics GP) that are used to connect with Insight.

If the number of CRM or ERP users exceeds the number of users covered by your Scribe Insight license, your Insight Administrator will receive a warning message each day that these connections are used. After 15 days, jobs using these connections will no longer run. If you receive warning messages that your site has too many users, you must either upgrade your Insight license to accommodate more users, or reduce the total number of users to under the licensed number.

If this situation occurs at your site, contact your Scribe Reseller or Scribe Sales Representative. See the *Scribe Insight Installation Guide* for full information about Insight user licensing.

▶ **Schema validation of Scribe Internal Database**

After the Scribe Insight installation or update procedure finishes, a Schema Validator utility is automatically run to check the Scribe Internal Database. This utility validates the Scribe Internal Database, and verifies that all tables and fields are as expected. If there is a problem with the Scribe Internal Database, an error message describing the error is returned, and you must contact Scribe Technical Support for help. See the *Scribe Insight Installation Guide* for more information about Schema Validation.

▶ **New Insight Help Library**

The Scribe Insight Help Library is undergoing an upgrade. The Online Help information in the original Insight Help Library is being migrated to the [new Insight Help Library](#).

If you cannot find the information you need in the new Insight Help Library, check the [original Insight Help Library](#).

Obsolete Features

The following features are obsolete, and have been removed from Scribe Insight:

▶ **Removed CRAM MD5 from Scribe Console**

CRAM MD5 authentication is no longer supported by Insight.

▶ **Removed Console SOAP Interface installation**

You can no longer install the Console SOAP Interface. Scribe recommends using the Windows Remote Desktop Connection (RDP) application to connect to a Scribe Console on another computer.

Fixes

Ticket #	Description
45664	D6020: European character accents were being displayed as question marks (?) and other odd characters in target CRM when using a source text file that is in ANSI format.
46293	D7299: Get error "Could not create new pub entity triggers: Sequence contains more than one matching element" when saving a publisher that contains GP tables and scribe entites that use the changes to base flag.
48607	D7243: LastRunDateTimeUTCDS is not translated into a date in the console when there is no source data.
48639, 50062	D7016: Failed to insert a row in the rejected row table; with error: "Application uses a value of the wrong type for the current operation."
48733	D6715: Issue when running with XMLLOOKUP in Console with extension name in upper case.
48954	D7402: Not able to use LASTRUNDATETIME or LASTRUNDATETIMEUTC in a query publisher filter connected to CRM.
49101, 49239, 47854, 48111, 49742, 50334, 50488	D6833: Need a way to re-run or show better errors if Upgrade of DB doesn't complete.
49491	D6927: Accessing Integration Server Properties in Console causes Run Time error 424.
49533	D6900: SSL over POP doesn't work in Scribe Console.
49778	D6960: OleDb connection fails to load tables that are longer than 30 characters.
49894	D6985: Transaction Radio Buttons not available until you go to All Steps Tab first.
50113, 50752	D7165: Query publisher/monitor do not work with .NET 4.5 installed.
50285	D7181/D7289: SourceKey is not written to TransactionErrors Table for GP Adapter when encountering errors and DTS logging is off.
50782	D7313: Sharepoint User Profile web service converting text to binary.
50809	D7301: Insight message box pops up with "Help!" during job execution.
50810	D7344: Error opening ExecutionLog Chart - runtime error 0.

Known issues

Ticket #	Description
48847	D6717: Formula change for GP-CRM template to prevent #Error! from being written to keyxref tables.
48885	D7343: Fatal Error 307 occurred: The DTS contains data links to fields that were not found and others.
49155	D6834: Text Adapter can't do update source even though it allows you to select it as an option.
49805	D6971: Query Publisher LastRunDateTime does not contain milliseconds.
50068	D7445: Query Publishers do not appear to be multi-threaded.
51013	D7334: Behavior differs depending on time-based/query-based IP in some instances.
	D7495: XML Message queue redirect. There is a limitation that this function will not work with "break on value change".

See the [Release Notes for Scribe Insight v7.6.0](#) for details about the previous release.

Feedback

Scribe is very interested in hearing about your experiences with our products and documentation. We welcome your suggestions for improvement and encourage you to use the Scribe OpenMind community at <http://openmind.scribesoftware.com> to provide feedback. OpenMind also lets you see information on upcoming product releases and engage in online discussions with Scribe product management and other Scribe users. Request a logon at https://openmind.scribesoftware.com/user_requests/new.
